MENSTRUAL CYCLE

The principal sign that a girl has become sexually mature and is capable of reproduction is the onset of menstruation (bleeding from the vagina). During each menstrual cycle, either of the two ovaries releases an ovum. In the absence of fertilization, the thickened uterine lining is shed along with blood vessels and tissues. The menstrual cycle is regulated by several hormones secreted by the pituitary gland and the ovaries.

FOLLICULAR AND OVULATORY PHASES

LUTEAL PHASE
